

# TRACKING POLLINATOR DIVERSITY (IN PARKING LOT ISLANDS AND OTHER URBAN GREEN SPACES)

*Talk given by: Deb Marr, PhD, Professor of Ecology  
Department of Biological Sciences, Indiana University  
South Bend.*

- Some plant species produce flowers that attract bees, while other plant species attract flies, butterflies, or even birds and bats.

- Learn how to track floral visitors, as well as ways that urban green spaces can better support pollinators.

JUNE 13, 2026  
2:00 P.M. EST  
AT THE NATURE CENTER  
AUDITORIUM

  
of  
Potato Creek State Park
